

19 JUN 2026

<DOCTYPE !> F:A:1

alias: Nexus

aim: to create an ai-agent to produce front-end html & css code.

core feature:

→ gives final output from one config-file

→ Prompts me for ✓ & ✗ and add more details

→ Probably train it by scrapping websites

languages/: # bash, python 3.8.3, Docker, Ollama Systems

POA

create a sandbox for our ~~the~~ Neural Network where it has terminal access.

N★ Introduction & basics of docker.

Eg: based on current project.

~/nexus/nexus - sandbox: ls

25 Dockerfile

→ A Dockerfile is a preset of instruction that auto-configs the environment for us/as a container is disposable. the Docker file defines the environment

What is a Docker Image?

Dockerfile $\longrightarrow$ Image $\longrightarrow$ container
 $\searrow$
 ↳ creating body.

↳ ls nexus

main.sh

communicator.py $\longleftrightarrow$ talks with LLM

10 executor.py

~~sh~~ Py =

~~/docker~~
 ☐ nexus-sandbox

15 D communicator.py talks with ollama that only returns commands as a JSON string.

The command is then sent to executor.py

20 D docker ps -a

Container ID : 353ba5a71535

Image : nexus-sandbox.

A

30

↳ basic flow of above architecture achieved.

27 JUN

29 Jun.

- Q] 1. Build and post a complete file to sandbox ✓
 2. ~~Get bit Hub remotely working.~~

A

communicator.py → builder.py → executor.py

L

completed file: builder

time: 15 min with testing.

30 Jun

Q]

work on building manager.py,
 manager.py is a greeter and a
 project initialiser.

15

manager.py

> inp(data)

↓
 parse data to initialise

workflow

↓
 communicator.py → executor.py

25

L

all preliminary intended features of
 manager.py shipped.

30

8/8

camlin

Date : _____

30 - 31 Jun

Goal integrate a memory module

use: Python

SQLite

01 July.

db - setup.

write initialisation script. ✓

1 10 /hexus> ls

memory # stores log files.

manager.py # decides workflow.

executor.py # Executes commands in docker containers terminal.

communicator.py # LLM - Python interface.

15 initialiser.py # set's up server data & log files.

rom_module.py # read - write hardcoded data

ram_module.py # cached & compiled data to give context to LLM. V2

pipeline & workflow

needs to be mastered

before adding more modules.
